# Alexander Bernstein

alexbstl@gmail.com 314-283-0026 alexbstl alexbstl

## Education

**University of California, Santa Barbara** Santa Barbara, CA
*Ph.D. in Statistics* *Sept. 2025*
*Dissertation:* "Long-Only Minimum Variance Portfolio Composition for Factor Models"

**Washington University in St. Louis** St. Louis, MO
*M.Sc. in Systems Science and Applied Mathematics* *Dec. 2016*
*B.A. in Mathematics and Economics (Cum Laude)* *May 2014*

## Publications and Working Papers

Banerjee, T., **Bernstein, A.**, Feinstein, Z., (2025). "Dynamic clearing and contagion in financial networks". *European Journal of Operational Research* 321.2, pp. 664–675.

**Bernstein, A.**, Shkolnik, A., (2025). "Asymptotics of Quadratic Forms on a Simplex". In Preparation.

## Talks and Presentations

**Analytical Solutions to the Constrained Markowitz Problem via Fixed Point Theory**
*INFORMS Annual Meeting*, Phoenix, AZ *Oct. 2023*

**Explicit Solutions for Position Constrained Minimum Variance Portfolios**
*SIAM Conf. on Applied and Computational Discrete Algorithms*, Online Poster *July 2021*
*CDAR Risk Seminar, UC Berkeley*, Berkeley, CA *March 2020*

## Projects

*Mean Field Game Reinforcement Learning:* Implemented a **Q-Learning** algorithm to solve the major-minor cyber-security game (Carmona, Delarue, et al. 2018)[Ex. 7.2.3]. Learned optimal defense policies through interaction with a dynamic population distribution $\mu$.

*Conditional Covariance Estimation:* Built a **Covariance Regression** model (**CovRegpy**) for covariate-adjusted covariance of idiosyncratic equity returns, a parsimonious alternative to **MGARCH**. Leveraged exogenous covariates to improve stability and reduce parameter overhead in high-dimensional settings.

*Quantitative Options Pricing:* Implemented **Monte Carlo** (Euler/Milstein) and **finite-difference** (implicit, explicit, and Crank-Nicolson) solvers for the **Heston** and **CEV** models. Built **Gaussian Process** (Matérn) and **PyTorch** neural-network surrogates to recover prices and Greeks (via autograd) at lower cost.

*Factor-Model Portfolio Pipeline:* Architected a modular, spec-driven (**YAML**) **Python** pipeline for portfolio construction from a universe of S&P 500 assets. Builds **PCA** factor models with pluggable covariance estimators (**POET** thresholding, eigenvector shrinkage, GARCH) and return estimators (**Numba**-JIT **Kalman**/EKF filters, robust Student-t, Black-Litterman, L1-adaptive control) registered through decorator registries. Solves constrained mean-variance optimization via **CVXPY** (CLARABEL) with a walk-forward out-of-sample backtester and a CLI rebalancer that emits live trades. Built on clean ABCs with unit tests and reproducible configs; runs the full **S&P 500** (daily/weekly data since 2010) in ~5–10 min per strategy.

*Portfolio Aggregator:* Built and self-hosted a **Dockerized FastAPI** dashboard that aggregates multi-brokerage accounts through a third-party **REST API** (SnapTrade) into a SQLite store, with scheduled auto-sync, historical snapshots, and daily-change tracking.

*Wellbore Geology Prediction (Kaggle):* Built the geologic-surface stage of a two-stage pipeline predicting subsurface layer depth along horizontal wells: **SPDE Matérn** Gaussian-random-field surfaces fit over

nearest calibration wells with a multi-marker ensemble, composed with an HMM-style **Viterbi** dynamic-programming refinement and Bayesian smoothness-averaging. Substantially reduced local out-of-fold RMSE over single-marker baselines.

# Teaching

**University of California, Santa Barbara** Santa Barbara, CA

*Teaching Assistant* *Sept. 2017 – March 2025*

- PSTAT 173: Risk Theory · PSTAT 170: Introduction to Financial Mathematics
- PSTAT 160AB: Applied Stochastic Processes · PSTAT 174/274: Time Series Analysis
- PSTAT 126: Regression Analysis · PSTAT 120AB: Probability and Mathematical Statistics
- PSTAT 5A/109: Introduction to Statistics

*Graduate Student Mentor* *Dec. 2019 – June 2024*

- Supervised undergraduate projects in Financial Mathematics and Optimization.
- Guided students in preparing posters and reports.
- Coached students in R for data analysis, supporting projects through to presentation at UCSB's internal research conference.

# Professional Experience

**Epic Systems** Madison, WI

*Technical Services Engineer* *Sept. 2014 – Sept. 2015*

- Supported customers in the use of their Electronic Medical Records system.
- Diagnosed customer requests and tailored software to fit their needs.
- Developed and implemented improvements to the Epic codebase.

**Prozess Technologie** St. Louis, MO

*Intern* *May 2013 – May 2014*

- Created computational simulations to explore the effectiveness of laboratory equipment.
- Tested, calibrated, and validated laboratory equipment used in pharmaceutical manufacturing.
- Implemented Monte Carlo simulations of fluorescence measurement to underpin that equipment analysis.

# Fellowships and Awards

Regents Fellowship, *UC Santa Barbara* *2017–2018*

John M. Olin Prize for Excellence in Economics, *Washington University in St. Louis* *2014*

# Skills

**Quantitative Methods:** Quantitative Research, Convex & Portfolio Optimization, Factor Models, Asset Pricing (options & bonds), Black-Litterman, Risk & Volatility Modeling, Time Series Analysis, Signal Processing, Stochastic Analysis, Asymptotic Theory.

**Machine Learning:** Neural Networks, Gaussian Processes, Reinforcement Learning (Q-Learning), Ensemble Methods (Boosting/Bagging), Bayesian Inference, Time Series Forecasting, Feature Engineering.

**Data & Modeling:** Data Science, Statistical Modeling, Experimentation & A/B Testing, Causal Inference, High-Dimensional Regression, Multivariate Statistics, End-to-End Pipelines, Model Deployment.

**Languages & Tools:** Python (NumPy, SciPy, Pandas, Scikit-Learn, PyTorch, CVXPY), R, MATLAB, SQL, C, Java, JavaScript/NodeJS, FastAPI, Flask, REST APIs, Docker, Git, Linux, AWS, MongoDB, Intersystems Caché, LaTeX, Markdown.
