Alexander Bernstein

alexbstl@gmail.com 314-283-0026 alexbstl alexbstl

Education

University of California, Santa Barbara Santa Barbara, CA
Ph.D. in Statistics *Sept. 2025*
Dissertation: "Long-Only Minimum Variance Portfolio Composition for Factor Models"

Washington University in St. Louis St. Louis, MO
M.Sc. in Systems Science and Applied Mathematics *Dec. 2016*
B.A. in Mathematics and Economics (Cum Laude) *May 2014*

Technical Skills

Languages & Tools: Python (NumPy, SciPy, Pandas, Scikit-Learn, PyTorch, CVXPY), SQL, R, C, Java, JavaScript/NodeJS, FastAPI, Flask, REST APIs, Docker, Git, Linux, AWS, MongoDB, LaTeX.

Machine Learning: Neural Networks, Gaussian Processes, Reinforcement Learning (Q-Learning), Ensemble Methods (Boosting/Bagging), Bayesian Inference, Time Series Forecasting, Feature Engineering.

Data & Modeling: Data Science, Statistical Modeling, Quantitative Research, Experimentation & A/B Testing, Causal Inference, High-Dimensional Regression, Time Series Analysis, Volatility Modeling, Signal Processing, Optimization, End-to-End Pipelines, Model Deployment.

Selected Projects

End-to-End Equity Modeling Pipeline (2026): Architected a modular, spec-driven (**YAML**) **Python** pipeline for portfolio construction from universe of S&P 500 assets: pluggable covariance/return estimators via decorator registries, **Numba**-JIT Kalman filters, **CVXPY** optimization, a walk-forward backtest engine, and a CLI rebalancer that emits live trades.

ML Surrogates for Derivative Pricing (2023): Trained **Gaussian Process** (Matérn) and **PyTorch** neural-network surrogates to emulate Monte Carlo and finite-difference (Crank-Nicolson) solvers for the **Heston** and **CEV** models, recovering prices and **Greeks** (via autograd) at a fraction of the numerical cost.

Portfolio Aggregator (production web app, 2026): Built and self-hosted a **Dockerized FastAPI** dashboard that aggregates multi-brokerage accounts through a third-party **REST API** (SnapTrade) into a SQLite store, with scheduled auto-sync, historical snapshots, and daily-change tracking.

Wellbore Geology Prediction (Kaggle, 2026): Substantially reduced local out-of-fold RMSE over single-marker baselines in a two-stage pipeline predicting subsurface layer depth along horizontal wells: built the geologic-surface stage — **SPDE Matérn** Gaussian-random-field surfaces fit over nearest calibration wells with a multi-marker ensemble — composed with an HMM-style **Viterbi** dynamic-programming refinement and Bayesian smoothness-averaging.

Experience

University of California, Santa Barbara Santa Barbara, CA
Teaching Assistant & Graduate Student Mentor *Sept. 2017 – March 2025*
Taught statistics, probability, regression, time series, and stochastic processes; mentored undergraduate research projects in modeling and optimization using R, including posters presented at UCSB's internal research conference.

Epic Systems Madison, WI
Technical Services Engineer *Sept. 2014 – Sept. 2015*
Partnered with large institutional clients to deploy and customize the Epic EHR in production, diagnosing issues and shipping codebase improvements under high-availability and regulatory constraints.

Prozess Technologie St. Louis, MO
Intern *May 2013 – May 2014*
Built fluorescence Monte Carlo simulations to validate laboratory equipment and calibrated pharmaceutical manufacturing hardware to industry standards.
